Recovery from amebiasis generally takes about 1 to 3 weeks, depending on the severity of the infection and timely treatment. [nizonide 500mg](#), containing nitazoxanide, is often prescribed to combat parasitic infections like amebiasis. The medication works by inhibiting the growth of the parasite, leading to a gradual improvement in symptoms such as diarrhea, abdominal pain, and fatigue. It's crucial to follow the doctor's dosage instructions carefully, usually a course lasting 3 to 10 days. Alongside medication, maintaining proper hydration and nutrition speeds up recovery. Always consult a healthcare professional before starting Nizonide 500 mg for accurate guidance and monitoring.
